

### **Subject: Panel and Air Flow Change on FME804, NME654, FME1204, NME954, FME1504RL and NME1254RL**

The front panel on all the above models is changing from louvered to non-louvered. The air cooled models are also changing from non-louvered to louvered service panels. This changes their air-flow pattern from in the front and out the back to in the sides and out the back.

There will not be a model number or revision change; panel parts must be ordered as needed by part number for either louver or non louver applications.

Note: Panel application is critical on air cooled models. The wrong panel will allow unfiltered air into the condenser, reduce air flow, or stop air flow completely.
