

Instructions

This bin top is used to fill the space between two 22" wide modular ice machines when used on a 48" wide ice storage bin.

1. Place filler plate from kit onto the center of the B948, insulation side down.
2. Place the two ice machines onto the bin, one at each edge.

Note: The filler plate will be next to the ice machine base. Do not overlap the plate with the ice machine.

3. Secure each ice machine to the bin at the back using 1 mounting strap per unit from kit and bolts from ice machine's hardware package.
4. Place a bead of food grade sealant from kit onto area where ice machine edge meets filler plate edge.
5. Wipe off excess sealant.
