Subject: Water Regulating Valve Change

The water regulating valve used in Scotsman water cooled models has been changed.

Service valve 11-0478-01 has changed to **11-0608-21**. 11-0478-01 is no longer available.

When replacing a valve in CU1526, CU2026 or CU3030 built before 1/24/14 the valve must be installed at an angle so it does not rub the base and to allow use of one of the original mounting holes. Effective with units built after 1/24/2014 the back panel on those models has been changed to fit the new valve, eliminating the need for the angled install. The new back panel numbers are A40252-001 for CU1526W and CU2026W; and A40253-001 for CU3030W.

Additionally:

- Valve 11-0198-02 will change to 11-0608-22. 11-0198-02 will continue to ship until stock is gone.
- Valve 11-0478-02 will change to 11-0608-23. 11-0478-02 will continue to ship until stock is gone.
- Valve 11-0424-01 will not have a replacement and will continue to ship until stock is gone. Use 11-0608-21 as a replacement and adjust the discharge pressure to 220 PSIG.
