Subject: Change to float valve used in CU1526, CU2026 and CU3030

The float valve on these models has been changed. The new part number is **02-4652-01**.

The change began July 20, 2011 with CU1526MA-1A serial number 11071320013884.

The new float valve does NOT have a manual shut off or a screen. The on-always feature eliminates the prior potential need to open the valve at start up. As always during an installation, the water line to the ice machine should be flushed prior to connection to avoid plumbing debris clogging the valve.

Either valve can be used in the CU1526/2026/3030 or SCE170.

Prior Valve,
